

Experience Blue Print (Revised)

Phase	Activity	Why (design rationale)	Learning Outcome (capability)	Learner Journey	Evidence of Success
1	Arrival & Question Pool	Andragogy: adults need early relevance and autonomy; anonymous color-coded submission lowers exposure risk for shy participants while activating prior motivation (Gagné Event 3)	Participants can articulate a question relevant to their own entrepreneurial curiosity	Foster belonging and inclusivity	Question poll completion rate
1	Expert Panel (How-Why-What's Next)	Authentic, unscripted storytelling over polished lecture matches Gen Z's high "BS-detector" and builds credibility through vulnerability, not authority (Gagné Event 4)	Participants can explain how FinTech supports entrepreneurship (Brief Outcome 1)	Psychological shift: from uncertainty to interest and empathy	Participant reactions while stories are told; traced emotion during failure/success moments
1	Visual Question Pool	Closing the loop between question and answer publicly reinforces that participation has real consequence, not just symbolic inclusion	Participants can identify how their own question connects to broader startup challenges (Brief Outcome 2)	Shift from listening to inclusivity and participation	Reactions when questions appear on screen or experts face a hard question
2	Team Formation & Role Assignment	Structured, cross-persona teams (blue/green/yellow) build psychological safety before performance is required, per Kolb's shift from observation into experimentation	Participants can identify their functional role within a collaborative task	Cohesion of the team boosts confidence and offers security	Body language cues revealing reluctance/unease or confidence/ease

Phase	Activity	Why (design rationale)	Learning Outcome (capability)	Learner Journey	Evidence of Success
2	Startup Game	Kolb's Active Experimentation — testing real actions against theoretical assumptions builds capability passive listening cannot; gamification increases motivation and knowledge retention	Participants can apply a fintech concept to a real-world sector problem, recognizing how gamified practice shifts their understanding of entrepreneurship in real time	Actual participation and brainstorming; confidence is reinforced through active experimentation	Group participation in every stage of this phase
2	Expert Coaching	Real-time mentoring simulates workplace feedback, building self-efficacy through reassurance rather than correction alone	Participants can incorporate expert feedback into their idea in real time	Motivation and attitude shift once expert advice is implemented	Change in management of the task once advice is implemented
2	Elevator Pitches	Time-boxed delivery forces prioritization and builds presentation fluency under real audience pressure	Participants can communicate a business idea effectively under time constraint (Brief Outcome 3)	Builds confidence and boosts team morale	Message is successfully communicated to experts and other participants
2	Shark Feedback	Healthy competition and visible reward act as extrinsic motivators that reinforce the intrinsic learning already happening (Andragogy: adults still respond to recognition)	Participants can participate confidently in a competitive networking conversation (Brief Outcome 4)	Anticipation and common cause build group dynamics and authentic relations	Ideas efficiently communicated, leading to the reward
3	Ambassador Migration	Breaking team silos via a designated cross-pollinator role builds transferable	Participants can explain their team's idea to an outside audience unfamiliar with it	Enthusiasm and anticipation build through team mingling	Ambassador's confidence and signs of welcome from other teams

Phase	Activity	Why (design rationale)	Learning Outcome (capability)	Learner Journey	Evidence of Success
		knowledge without requiring every participant to leave their safety zone			
3	World Café Discussion	Exchange across teams surfaces variation and challenge participants couldn't generate alone, deepening Kolb's Reflective Observation stage	Participants can compare their idea against an alternative perspective	Confidence boost and curiosity enhanced	Exchange-of-ideas completion rate
3	Homecoming & Reflection	Returning to the original team to synthesize closes Kolb's cycle (Reflection → Conceptualization) and supports Gagné's Event 9 (retention/transfer)	Participants can identify one next step for exploring entrepreneurship (Brief Outcome 5)	Group barriers bring confidence	Physical and verbal cues within original teams during idea processing
4	Silo-Buster Digital Directory	Extending connection beyond the live event addresses the networking gap surfaced in the Learner Journey Map; supports different personas differently (security, assurance, continued exploration)	Participants can identify a concrete channel for continuing a professional connection made at the event	Emotional intelligence increases through breaking boundaries	Participation rate
4	Informal Networking	Unstructured time after formal activity allows organic rapport-building without facilitation pressure	Participants can initiate an informal professional conversation independently	Confidence boost	Follow-up communication
