

Instructional Storyboard — Final Polished Version

FinTech & Startups Learning Experience — Storyline Portfolio Project

This template storyboards the four selected transformational moments (The Panel, The Startup Game, The World Café, The Silo-Buster Digital Directory) for adaptation into the Storyline portfolio piece.

Built on five instructional design frameworks applied throughout this project: Andragogy (Knowles), Gagné's Nine Events, Bloom's Taxonomy, Kolb's Experiential Learning Cycle, and the Kirkpatrick Model (modified).

Part A — Phase Framework Key

Filled once per transformational moment, not per screen.

Transformational Moment	Gagné Event(s)	Kolb Stage	Andragogy Principle	Kirkpatrick Data Fed
The Panel	Present the content / Provide learning guidance	Concrete Experience	Readiness to learn / Role of experience	Reaction
The Startup Game	Elicit performance	Active Experimentation	Self-concept	Applied Practice
The World Café	Enhance retention	Abstract Conceptualization	Orientation to learning	Behavior
The Silo-Buster Digital Directory	Enhance transfer	Reflective Observation	Motivation	Results

Note: Gagné's Event 9 (retention and transfer) was deliberately split across two touchpoints, since this project's post-event follow-through happens through two distinct mechanisms rather than one.

Part B — Transformation Filter

One row per activity within each of the four transformational moments. Each verdict was tested against a single question: does this activity's value come from content, or from live human presence/unpredictability?

Activity	Can it exist in Storyline?	Storyline Equivalent	Rationale
Authentic Storytelling (How-Why-What's Next)	As-is	Avatar in a large-room scene; click to reveal caption (or narrated audio, if feasible) with the expert's story	Content-driven, not unpredictability-driven — real stories translate well to asynchronous formats; audio preferred over text where possible to preserve authenticity of tone
Question Pool submission/categorization	Adapted	Large-screen visual showing submitted questions, color-coded by persona	Content/data availability gap — sample questions authored by designer to simulate authentic submissions, since real participant data doesn't exist for this version
Live Q&A (experts answering in real time)	Adapted	Learner selects a question from the pool (or from 3–4 options); avatar expert delivers a pre-scripted response	Live human presence/social unpredictability — true live, unscripted interaction cannot exist in Storyline; this simulates the feeling of live Q&A through a pre-written branch rather than genuine spontaneity
Team Building	Adapted	Learner takes on a directorial/facilitator role: dragging and dropping startup ideas and team	Live human presence/social unpredictability — live team formation is largely about physical presence, body

Activity	Can it exist in Storyline?	Storyline Equivalent	Rationale
		members onto tables to form eight teams, rather than joining one team as a single persona	language, and organic social bonding; the learner's role was deliberately reframed from "team member" to "team assigner" to fit an achievable Storyline mechanic
Role Distribution	As-is	Automated role distribution based on color	Content-driven decision — roles were already tied to color categories during live sign-up, so no live/organic assignment process is lost in translation
Start-up Formation	Adapted	Sample startup ideas that can be enhanced with Fintech; learner chooses from a pool of choices	Content/data availability gap, not a live-presence issue — resolved by designer-authored sample startup ideas to simulate authentic submissions, since real participant-generated data doesn't exist for this asynchronous version
Experts Mentoring	Adapted	Expert avatars interact with participant avatars within the room; click to reveal question with follow-up expert advice (narrated audio if possible)	Live human presence/social unpredictability — scripted-illusion interaction between experts and participants, since real-time responsive coaching cannot be depicted
The Elevator Pitch, the Shark Tank & Reward	Adapted	Learner clicks through each of the eight teams to reveal their elevator pitch — delivered by whichever team member the learner chooses to step up; pitch content stays uniform regardless of who delivers it. A button then appears on one of the Shark-expert avatars, revealing the criteria that make a pitch stand out and signaling that the experts have already reached their own decision, while inviting the learner to weigh in with a "third eye." The learner picks a winning team; depending on whether that pick matches the experts' actual decision, the learner receives either a confirming response or a short explanation of the experts' reasoning. Clock running ~60" per pitch	Live human presence/social unpredictability — real-life speech, live judging, and audience-dependent timing cannot exist as-is; resolved by pre-scripted pitch content and a branching match/no-match response. Combines the credibility of expert judgment with genuine learner agency, pushing the learner into Bloom's "Evaluate" level rather than passive observation. Persona-differentiated pitch delivery was considered and deliberately excluded — the evaluative focus is the idea's merit, not the messenger's communication style
Ambassador Role Assignment	As-is	Avatar separates from the rest of the team, distinguished by a green dot or green outfit	Content-driven; role predetermined by the persona
Ambassador Migration	Adapted	Avatar of Ambassador leaving original team and joining another; different teams symbolized with different tables to visualize transition for the learner	Live human presence/social unpredictability — table symbolism used to simulate physical movement and change of scenery
The Briefing Stage & Homecoming	Adapted	Avatar Ambassador consults with a new team (learner chooses which team from the startup team pool; clicks on the Ambassador to reveal a possible question, and on a team member to reveal a follow-up caption); when time runs out, the Ambassador avatar returns to the original team and shares new knowledge based on the team they consulted with	Live human presence/social unpredictability — live physical presence and spontaneous body language cannot be depicted, but the core content exchange (idea-sharing, challenge, reflection, and synthesis) can be scripted and preserved through avatar dialogue and learner input prompts. Merged into one row since Briefing and Homecoming form a single continuous out-and-back exchange
The Deliverable (Notebook)	Excluded	—	The notebook's value comes from being a single physical object carried continuously across all three live phases and held up in the closing photo; a

Activity	Can it exist in Storyline?	Storyline Equivalent	Rationale
			digital reflection field would only replicate isolated content entry, not the continuity or physicality that made the original meaningful
QR Code Slide	As-is	Mentimeter slide with QR code appears on a big screen, with a button on it	Purely content/interface-driven with no live-human element involved, so the slide and prompt translate directly
Directory Outcome	Adapted	Mock/sample directory populated with placeholder entries appears on screen once the learner clicks the Mentimeter slide	Content/data availability gap — author-generated placeholder entries, since there is no live cohort to populate a real directory
Closing Ritual	Adapted	A final illustrated scene showing all persona avatars gathered together, notebooks/badges raised, with a completion message to the learner	Live human presence/social unpredictability — physical group presence and a real shared photo cannot exist in Storyline, but the symbolic function of visible, collective completion can be preserved through a closing illustrated scene; this matters particularly for lower-confidence personas, for whom a clear completion marker signals real accomplishment

Note: For the World Café moment, the learner takes on the Ambassador role throughout Migration, Briefing, and Homecoming.

Part C — Screen-by-Screen Storyboard

One row per screen. The four questions are answered in order — "How will I build it?" is always last.

Persona Lens explicitly names either the specific differentiating element, or is marked "(uniform)" where no persona variation applies.

Screen #	Screen Title	Persona Lens	1. What is happening?	2. Why is it happening?	3. What should change in the learner?	4. How will I build it?
1.1	Arrival — The Room	Individual thought bubbles per persona	Learner enters a modern room scene with 40 avatar participants; a tablet/screen shows the Question Pool actively receiving entries; learner can hover/click on avatars to see their color-coded persona	Gagné Event 1 + Event 3; the room and Question Pool draw attention, while hovering on avatars surfaces each persona's pre-existing motivation and expectations rather than teaching anything new. Andragogy: orientation to learning	Affective/orientation shift: the learner moves from unfamiliarity to a first sense of belonging and social orientation within the room — not new knowledge yet, but a felt sense of "where do I fit here"	Visual scene of a populated room; learner clicks on avatars to reveal color and a short persona-specific thought bubble (e.g., a more self-conscious line for the Aspiring Entrepreneur, consistent with their lower networking confidence in the Journey Map)
1.2	Host Presenting the Event	(uniform)	Host avatar appears, speaking in a casual, transparent register with	Tone deliberately matches the audience's skepticism of formal/corporate delivery; Gagné	Confidence shift: the learner moves from uncertainty to an understanding of the event and its outcomes	Host avatar positioned in the middle of the room with a screen behind him containing color-coded questions; learner clicks on avatar to reveal an

Screen #	Screen Title	Persona Lens	1. What is happening?	2. Why is it happening?	3. What should change in the learner?	4. How will I build it?
			digitally-fluent phrasing, while walking the learner through the event's structure and outcomes	Event 2 (delivered conversationally, not as a formal objectives list)		information bubble; host fades into the room
1.3	The Experts' Panel	(uniform)	Panel of expert avatars appears; authentic storytelling guided by inclusivity, real-time delivery, and the absence of corporate buzzwords	Communication style matches the audience's pragmatic and career-driven style; Gagné's Event 4, Kolb's Concrete Experience stage; Andragogy: readiness to learn	Psychological shift: empathy and identification; authentic talk fosters a sense of emotional clarity	Experts' avatar panel dominates the room; circle table with big screen behind them; learner clicks on avatars to reveal a different story
1.4	The Question Pool	Color-coded questions	Panel of experts remains, with a big screen behind them; entry questions appear on screen, color-coded by persona	Interactivity between participants and experts; Gagné's Event 5 (Provide Learning Guidance); Andragogy: role of experience; Kirkpatrick: Reaction	Confidence boost: interactivity increases self-confidence and inclusion; learners begin to identify with learning outcomes	Experts' avatar panel remains in front, but the screen behind them lights up to signal Q&A time; learner clicks on color-coded questions, which trigger an answer from a panel expert
2.1	The Startup Game Intro	(uniform)	Host avatar reappears; casual, conversational tone as they explain the rules of the game	Tone matches audience's pragmatic style; Gagné's Event 4 (Present the Content); Andragogy: intrinsic motivation	Orientation shift: the learner actively becomes part of the process; confidence rises as they identify with the rules and process	Host avatar positioned in the center of an empty room; as they explain, buttons appear around them revealing objects (tables signifying teams, a screen with startup ideas, the reward as the final phase, a clock to run process time); host fades into the room, but objects remain to prepare the next scene
2.2	The Startup Game	Learner assigns teams and ideas (director role)	The room consists of eight tables for five-person teams; a big screen with startup ideas sits behind them; a clock above the screen measures time	Kolb's Active Experimentation; Gagné's Event 6 (Elicit Performance); Andragogy: self-concept	Key behavioral change: the learner applies group-forming logic, matching ideas and people into cohesive units; rising sense of ownership over the process	Screen is full with eight tables; learner clicks on a table to reveal eight potential team members and their color-coded personas; learner drags and drops startup ideas from the screen onto tables to form teams and match them with a mission

Screen #	Screen Title	Persona Lens	1. What is happening?	2. Why is it happening?	3. What should change in the learner?	4. How will I build it?
2.3	The Experts' Mentoring	(uniform)	Experts move around tables, offering insight and instant feedback	Gagné's Event 7 (Provide Feedback); Andragogy: orientation to learning; Kolb's Active Experimentation	Behavioral change: instant feedback and mentoring prompts an in-the-moment reflective pivot and heightens engagement	Expert avatars move around tables; learner clicks on a group member to reveal a thought or problem, then clicks on the expert avatar to reveal follow-up feedback; clock signifies time running out; room clears of objects
2.4	The Elevator Pitch, the Shark Tank & Reward	Learner's own evaluative judgment	Learner clicks through each of the eight teams to reveal their elevator pitch — delivered by whichever team member the learner chose to have step up; pitch content stays uniform. A button appears on one of the Shark-expert avatars, revealing criteria for a standout pitch and signaling the experts have already decided, while inviting the learner's own "third eye." Learner picks a winning team; depending on whether that pick matches the experts' decision, the learner receives a confirming response or a short explanation of the experts' reasoning. Clock running ~60" per pitch	Combines the credibility of expert judgment with genuine learner agency; Kolb's Abstract Conceptualization (thinking) and Active Experimentation (doing); Andragogy: need to know; Gagné's Events 1 & 2 combined push the learner into Bloom's "Evaluate" level rather than passive observation	Orientation shift: the learner practices weighing several competing ideas against a shared set of criteria and forming their own judgment — then has that judgment either affirmed or gently challenged by expert reasoning, rather than simply being told who "won"	Team avatars, each triggering a pitch reveal on click; a "reveal criteria" trigger on a Shark avatar; a drag-and-drop or click-to-select mechanic for the learner's own pick; a branching response (match vs. no-match) delivering the appropriate follow-up message

Screen #	Screen Title	Persona Lens	1. What is happening?	2. Why is it happening?	3. What should change in the learner?	4. How will I build it?
3.1	The World Café Introduction & Ambassadors' Role Assignment	(uniform)	Host avatar reappears; big screen behind him explains the function of this stage; Ambassador avatars surface once the rules are explained; host fades	Explanation of the rules allows participants to identify with the mission and apply pre-existing knowledge (Bloom's Understand phase); Gagné's Event 2 (Inform Learners of Objectives); Andragogy: role of experience; Kolb's Active Experimentation followed by Reflective Observation	Psychological shift: as competitive tension is highest right after the Shark Tank, the Café mechanic pulls learners out of their own team bubble and into a broader, less zero-sum activity	Host avatar in the center of the room; big screen behind him with guidance on how the World Café functions; when the host delivers their speech, they fade into the room; Ambassador avatars appear with green-colored dots above them; screen behind signals "Migration time"
3.2	The Briefing & Homecoming	Ambassador avatars (color-coded)	Ambassador avatars, with tables behind them, mingle with different teams; a clock runs the time for the process; when the clock runs out, Ambassadors return to their original teams	Gagné Event 3 (Stimulate recall of prior learning), moving from Kolb's Abstract Conceptualization to Reflective Observation; Andragogy: role of experience; Bloom's Evaluate phase	Emotional shift: silo-breaking builds confidence and group morale; Ambassadors' confidence rises as they take on the role and bring insight back to their team	Eight Ambassador avatars in the middle of the room, ready to mingle; a button reveals eight tables in the background; learner clicks on Ambassadors to reveal possible questions about other teams; clicks on team members to generate follow-up responses; when time is up, Ambassadors return to their original teams (signified by their original startup idea)
4.1	The QR Code Slide	(uniform)	Eight groups appear as originally formed; a big screen displays a "Networking" prompt; learner clicks it and a QR code appears; clicking the code reveals a screen with sample participant LinkedIn profile entries	Gagné Event 9 (Enhance Transfer, per the Part A split); Kolb's Reflective Observation; Andragogy: intrinsic motivation	Inclusion shift: networking raises expectations, especially for the Aspiring Entrepreneur; confidence rises with new opportunities opening up	Groups as originally formed appear in the room; big screen behind signals the "Networking" button; learner clicks it, a QR code appears, and clicking the code reveals the sample directory

Screen #	Screen Title	Persona Lens	1. What is happening?	2. Why is it happening?	3. What should change in the learner?	4. How will I build it?
4.2	The Closing Ritual	Persona-specific completion messages	Groups spread and individuals gather with notebooks and a trophy/badge raised; screen shows a completion message for the learner	Sense of completion and achievement; Gagné's Event 8 (Assess Performance); Andragogy: serves as the bridge to self-concept	Confidence shift, especially for lower-confidence personas, now marked by a sense of completion; emotional transition for the Tech Enthusiast from isolation to connection, and for the Curious Individual from suspicion to relief	Closing illustrated scene with all avatars in the center of the room; trophies/badges/physical notebooks held up for the picture; big screen behind them with a completion message; learner clicks on buttons appearing on participants; bubbles appear with different persona-specific completion messages

Guiding questions used throughout

- **Gagné check:** Which single event is this screen primarily doing? If it can't be named in one word, the screen may be trying to do too much.
- **Bloom check:** Does Question 3 use a specific, observable verb (explain, identify, apply, communicate) rather than a vague one (understand, learn about, be aware of)?
- **Kolb check:** Where in the cycle does this screen sit, and did the previous screen supply what this one needs?
- **Andragogy check:** Would an adult learner ask "why does this matter to me" at this screen — and does the screen already answer that?
- **Kirkpatrick check:** Does this screen produce a data point at all? Not every screen needs to.
- **Persona Lens check:** Does the Persona Lens column name the one interactive element carrying differentiation, or explicitly mark the screen as uniform?
