

Learning Design Brief

Project: FinTech & Startups Learning Experience

Client: Entrepreneurship Talks in collaboration with Snappi Bank

Designer: Malaki Nicoleta

Version: 1.0

Date: 21.07.2026

1. Project Overview

Purpose

Design a 2–3 hour interactive FinTech & Startups event for an audience of approximately 40 young adults (18–28) in collaboration with Snappi Bank. The event aims to promote entrepreneurship by helping participants explore the relationship between FinTech, innovation, and startup development through discussion, gamification and authentic activities.

2. Business Need / Organizational Goal

The NGO's mission is to promote entrepreneurship among young adults. This event supports that mission by introducing participants to entrepreneurial thinking and demonstrating how FinTech is transforming finance and modern business.

3. Performance gap

Many young adults are interested in entrepreneurship but lack exposure to authentic startup experiences, practical knowledge of FinTech, and confidence engaging with founders and industry professionals.

4. Design Principles

- Authenticity over abstraction.
- Participation over passive listening.
- Reflection strengthens transfer.
- Networking is part of learning.
- Confidence develops through practice.

5. Design Risks

- Participants have widely varying knowledge.
- Limited time for practice.
- Panel discussion dominates interaction.
- Networking participation may vary.

6. Audience Analysis

Participants are between 18–28 years old with mixed experience. Some may be interested in entrepreneurship, others are simply curious about innovation and career opportunities or tech enthusiasts.

Special consideration for the audience: Gen Z and Youngest Millennials

- Highly pragmatic, deeply skeptical of traditional financial institutions, and fiercely independent.
- Career-driven, collaborative, and actively looking for financial stability and wealth-building tools.
- Possess an incredibly high "BS detector."
- Value vulnerability, messy startup stories.
- Intensely focused on financial literacy.
- View fintech not as a luxury or a tech trend, but as a survival tool for a tough economy.
- Consider fintech as the infrastructure that allows them to monetize side hustles.

- Care about utility.
- Want to hear how fintech levels the playing field (Crowdfunding, micro-loans, and borderless neobanks)
- Event design and stories told must reflect this speed.

7. Learning Outcomes

By the end of the event participants will be able to:

- Explain how FinTech supports entrepreneurship (panel storytelling).
- Identify common startup challenges (panel storytelling).
- Communicate a business idea effectively (gamification).
- Participate confidently in networking conversations (gamification).
- Identify one next step for exploring entrepreneurship (reflection).

8. Instructional Strategy

The event will use:

- authentic examples
- expert panel discussion
- guided reflection
- collaborative activities
- networking
- experiential learning
- learner participation

9. Event Architecture

Introduction→Founder Story→Panel Discussion→Question Poll→Gamification—>Reflection→Networking

10. Constraints

- Limited time
- Mixed audience
- Single-session event
- No prerequisite knowledge assumed

11. Evaluation

Level	What it measures here	Event Component	Data Source
1. Reaction	Engagement, relevance, comfort	Arrival Hook / Question Pool participation	App submission rate, live poll engagement
2. Learning	Knowledge/comprehension gained during the session	Panel storytelling + World Café synthesis	Pre-panel question quality vs. post-event notebook entries
3. Applied Practice (adapted from Behavior)	Demonstrated skill/knowledge in a safe simulation, in the moment	Startup Game (pitch construction, role performance)	Facilitator/Snappi expert observation rubric
4. Intent to Transfer (adapted from Results)	Stated intent to carry learning forward	Final Notebook Entry / Commitments to Action	Self-reported next-step commitments

12. Timeline

Phase	Deliverable	Target Date	Status
Discovery	Meet stakeholders, define audience, clarify goals and constraints	Complete	✓
Analysis	Complete Learning Design Brief and draft learning outcomes	Today	In Progress

Phase	Deliverable	Target Date	Status
Design	Develop event architecture, session flow, learning activities, and networking experience	This week	Planned
Review	Present draft to NGO team and gather feedback	Next meeting	Planned
Revision	Refine agenda, activities, and learning outcomes based on stakeholder feedback	After review	Planned
Final Design	Deliver finalized event plan and facilitator recommendations	Before event	Planned
Reflection (Portfolio)	Document design decisions, lessons learned, and evaluation for portfolio case study	After event	Planned

13. Design Rationale

Decision	Rationale
The Question Pool Framework	Democratizes the room, primes active listening, guarantees content quality and captures data metrics
Panel discussion and storytelling	Combats corporate polish, hooks the youth mindset, maintains high information density, establishes a learning baseline
Gamification	Drives low-Friction collaboration, leverages strengths via role-play, flips the power structure, enables behavior observation
Reflection	Forces cognitive consolidation, validates every identity tier, closes the feedback loop, delivers tangible ROI metrics
